

CERTIFIED QUALITY  
MANAGEMENT SYSTEM

UNI EN ISO **9001:2015**

## Quality Policy of Immagina Biotechnology

*quality unlocks the power of expertise to our clients*

The ISO 9001 certification is a significant step for the entire Immagina team, helping us to continuously improve and deliver the best products, services, and support to our customers. Immagina is developing and implementing a quality management system to demonstrate its ability to consistently provide products that meet customer and regulatory requirements, including continual improvement and the prevention of non-conformity.

The ISO 9001 certification aims to ensure the highest level of quality and highlights Immagina commitment to continuously innovating and developing premium ribosome/RNA analysis solutions. All current products are designed and developed according to predetermined specifications. Immagina provides reagent tools and research-use-only laboratory instruments. Immagina is not a manufacturer of finished medical devices. The framework of our quality system defines the authorities and responsibilities of the management personnel involved in the operation of the system and provides a transparent description of all processes.

Immagina strives to consistently ensure that the quality of our products and services meets customer requirements.

Immagina corporate values integrate the concept of quality into all internal and external interactions and strategic decisions. Our quality standards are used to constantly measure our performance and guide improvements in our products and processes.
